- Simple Graywater System Notification Form

Graywater is water from bathtubs, showers, bathroom sinks, washing machines, and laundry tubs. Graywater does not include waste water from toilets, urinals, kitchen sinks, dishwashers, photo lab sinks, or water from soiled diapers. It is not reclaimed water distributed through "purple pipes." Graywater can be diverted from the sewer or septic system and used for landscape irrigation and constructed wetlands.

The 2013 California Plumbing Code (CPC) classifies graywater systems based on construction and volume. Different requirements govern each system.
